

iNaturalist at [iNaturalist.org](https://www.inaturalist.org) is still the premier Citizen Scientist App, and all Research Grade Identifications are fed into the Global Biodiversity Database. The app can be downloaded for free from the Google App Store or Apple Store. As of 2023, iNaturalist provided over half of that database. Upper Valley institutions relying on iNaturalist sightings include NH Fish and Game (www.inaturalist.org/projects/nh-butterfly-monitoring-network) and the Vermont Center for Ecosystem Studies (<https://www.inaturalist.org/projects/pollinator-interactions-on-plants-pip-of-the-ne-us>). Help us by putting the app on your phone, recording what you see and sharing it through the app so that researchers can access your data. You don't have to have an account, nor do you need to identify yourself.
